Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

New grounds of rejection are contained within this Office Action. Accordingly this action has been made Non-Final.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 4,046,139 to Horn in view of U.S. Patent No. 4,830,022 to Harshe et al.

In regard to claim 1, Horn discloses a monitoring system including a temperature sensor (36) that is positioned within a tracheotomy tube that is inserted into the windpipe area of a patient. Horn discloses the temperature sensor continuously monitoring the patient's body temperature and being used in association with any measuring or indicating apparatus (Col. 2, lines 67 – 68). Horn fails to disclose an audible alert alarm that is emitted when the sensor detects a body temperature that falls below a predetermined set temperature. However, Harshe et al. teaches a monitoring system including a temperature sensor for monitoring a patient's body temperature and an alarm mechanism associated with the temperature sensor that emits an audible alert when the sensor detects a body temperature that falls below a predetermined set temperature (Col. 2, lines 7 – 13). It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the system as disclosed by Horn to include an alert mechanism as taught by Harshe et al. in order to alert the caregiver of the existence of life-threatening situations (Col. 5, lines 5 – 11).
